# ３－１．Score's Details : News Sentiment Score

## News Sentiment Score

News Sentiment Score from a AI_NLP model which calculates score from news. When the news is good for the company's stock price, it's close to 100 and when it's negative, close to Zero.

Our Japanese analysts actually read/tag news and make training data for improving its quality. (Target: One day to One month)

# ３－２． Score's Details ：SR Sentiment Score

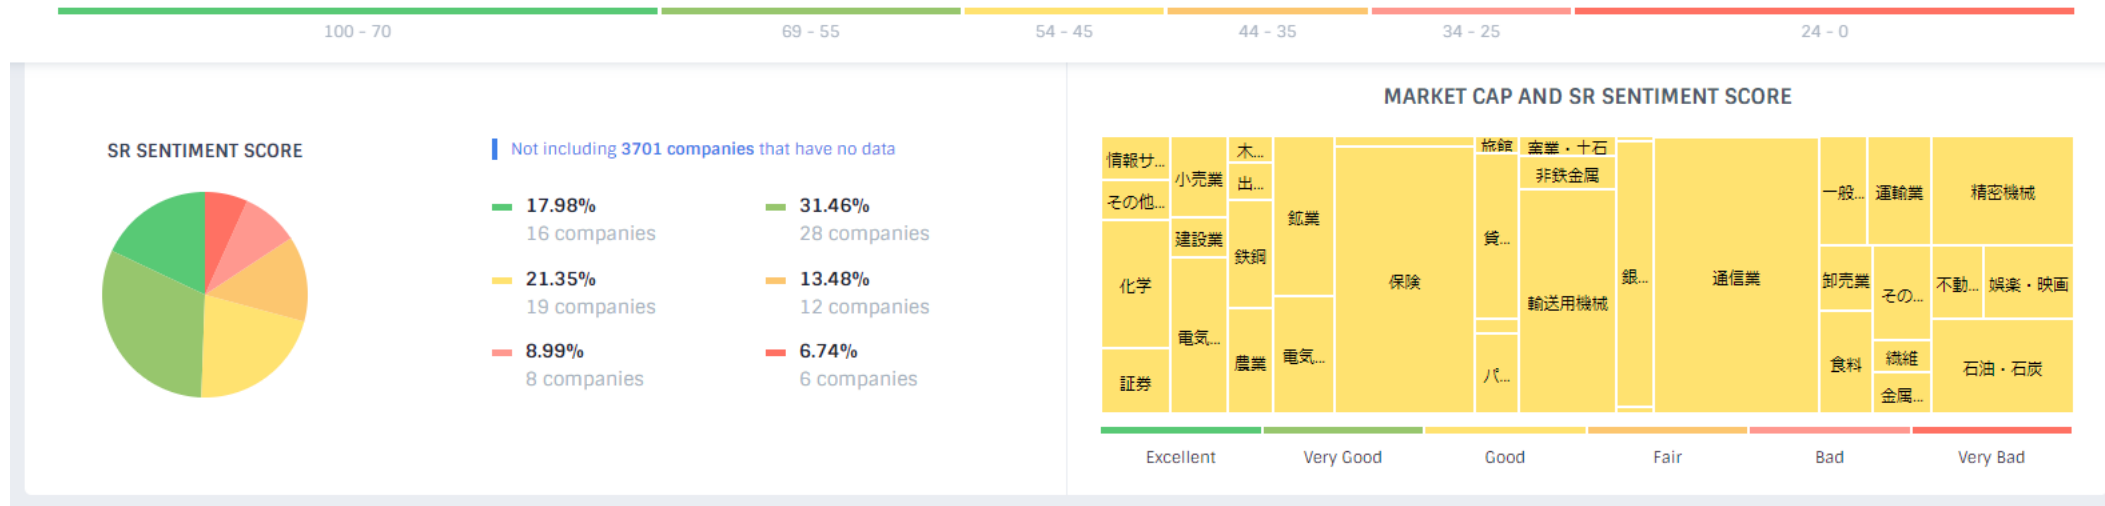

## SR(Securities Report ) Sentiment Score

SR (Securities Report) Sentiment Score is the score derived from a security report (= 10K) disclosed by a company. The score mainly evaluates its readability and variety of vocabulary. Main information comes from "Management Analysis of Financial Condition, Results of Operations and Cash Flows" of "Business Overview" in the Annual Securities Report using Natural Language Processing. Adapting NLP technics on a securities reports which disclosed by listed company. Our SR sentiment score performs well in long term alpha through back testing. (Target: One year)
# ３－３． Score's Details ：FS Forecast Score

## FS(Financial Statement ) Forecast Score

Each listed companies' Financial Statement are forecasted using Nikkei FTRI's FS forecasting simulator "AERIS". AERIS is actually used by many banks for stress testing purpose and portfolio simulation. (Target: One year)
# ３－４． Score's Details ：Fundamental score

## Fundamental Score

Fundamental Score is calculated from financial information of the company such as FCF and ROA. The score is selected from its uniqueness which are uncorrelated with the Fama and French Three Factors, in terms of making more alpha. (Target: One year)
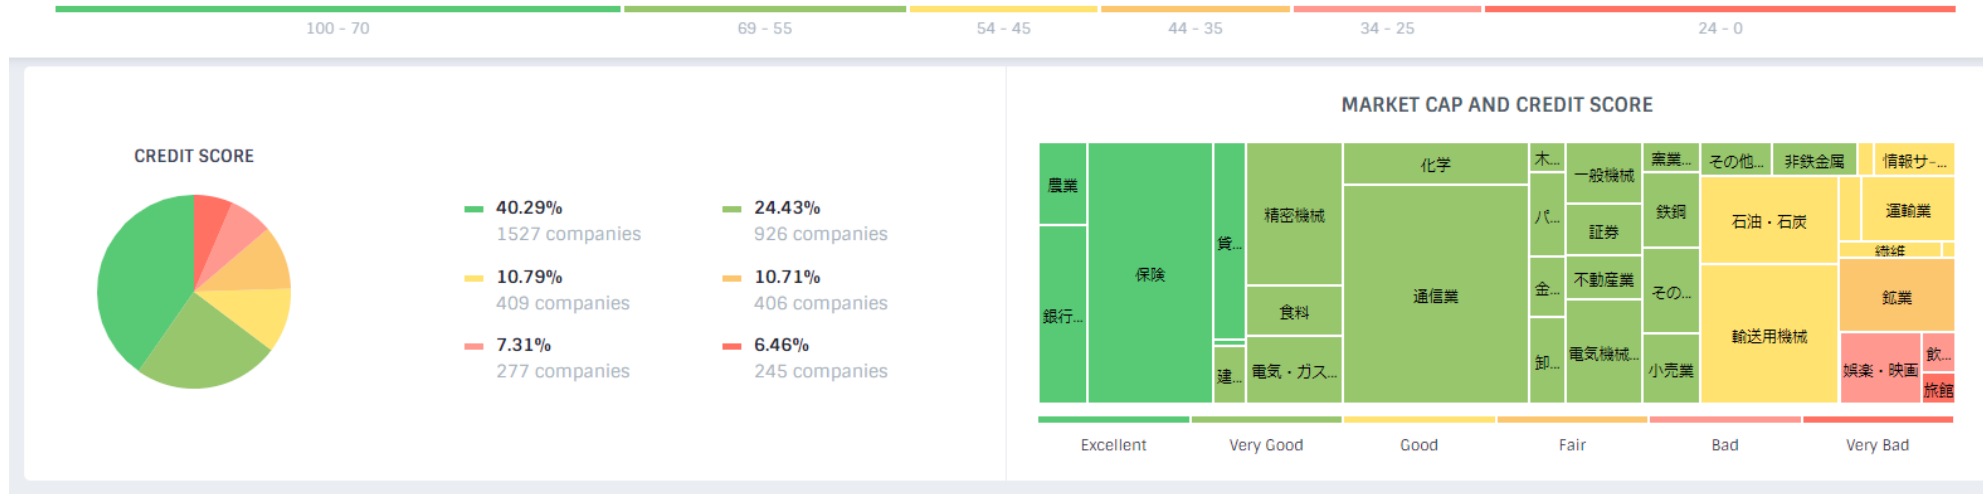

# ３－５． Score's Details ：Total Score

## Total Score

Total Score is aggregated score which aims to evaluate company's intrinsic value by using SMACOM output (from 1.to 4. scores) as input variables. (Target: One day to One year)
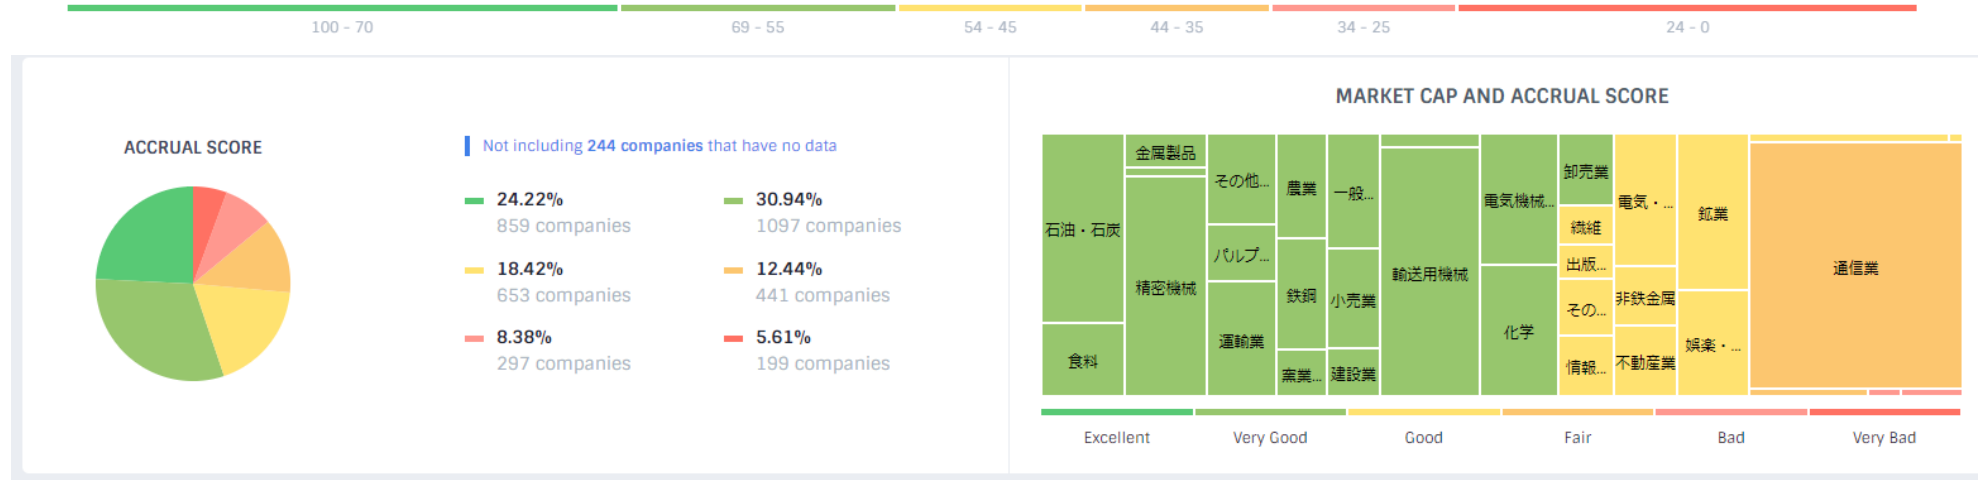

# ３－６． Score's Details ：Credit Score

## Credit Score

Credit Score calculates probability of default that a company could be in solvency in less then one year. For developing the credit scoring model, we used our unique default database which is exclusively collected and made by Nikkei FTRI. (Target: One year)
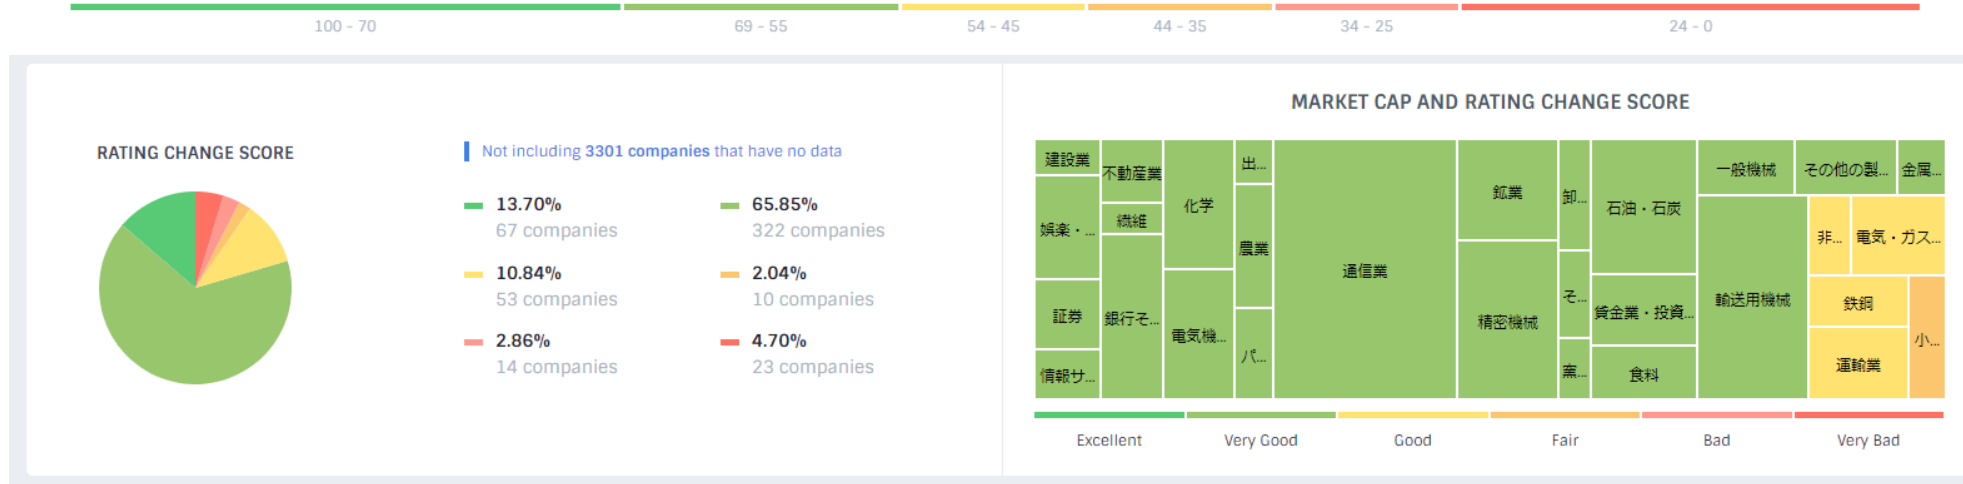

# ３－７．　Score's Details ：Accrual Score

## Accrual Score

Accrual Score evaluates quality of accounting information disclosed by company. When the score is high, it means the company's accounting information such as asset, sales, profit, etc. could be manipulated or less trustworthy. (Target: NA)

# ３－８．　Score's Details　：Rating Change Score

## Rating Change Score

Rating Change Score estimates probability of changing Credit Rating of a company that have a credit rating from credit rating agency. (Target: 3M, 6M, 1Y)

# 4. Data

Past 5 year's Back testing data is available for trial/evaluation purpose. Please feel free to ask us if you interested in its data. For developing own firm's model and trading algorism, SMACOM also could provide various detailed data such as explanatory variables and ratios used in its models.
